- **Definition 2.1.1** (M. Uschold, 10/2020) In the second item of the definition of a free Γ-CW-complex, the condition should be "$g \cdot e \cap e = \emptyset$" instead of "$\neq \emptyset$".
- **Definition 4.17** (M. Uschold, 04/2022) In the last two lines ([stable] orbit equivalence of groups), the standard actions should be essentially free.
- **p. 42, definition of ν** (M. Uschold, 04/2022) In the definition of ν, the integration is via $d\mu(x)$, not via $d\mu(x, y)$.
- **Corollary 4.2.9** (M. Uschold, 04/2022) Again, the standard actions should be essentially free.
